# A Win-Win

BY JOY FINNEGAN  
EDITOR-IN-CHIEF

**W**hat sparked your interest in fixing airplanes or aviation in general? I'm sure there was a moment when something clicked, and you thought, "That is what I want to do!"

Maybe you were screened for aptitude in the military and directed to aircraft maintenance. Perhaps you read a book about airplanes and thought, "I want to build one of those someday." Maybe you saw somewhere that Lindbergh's first words when he landed at Le Bourget were, "Is there a mechanic here?" Or was it Joe Patroni, the character from the movie *Airport* saying that a 707 can do everything but read that inspired you to head into this field?

Could have been any of those things but more than likely, I bet there was someone in your life who already worked in the aviation maintenance arena and encouraged you to become an A&P or to get into the field in some way. Most of us who get into aviation started out doing it because we had someone encourage us to do so.

For me, it was my father. When I read a book about aviation and flying, I told him about it and that I thought it would be amazing to learn to fly. Surprisingly, his response was, "Well we can't do that sitting the living room – let's go to the airport!" I took a Cessna discovery flight and was hooked. But, if he hadn't been receptive to my request, he easily could have squashed my budding interest. After that, he continued to encourage me. When it came time to look at colleges, we researched options with aviation programs and flight training together, finally settling on Embry-Riddle Aeronautical University.

Once there, I had instructors that took an interest, continuing to encourage me to push a little harder, study a little longer, get the best grades I could and join campus clubs like the school newspaper. So, mentoring continued for me throughout my time there.

We need more of this in the maintenance arena. I encourage all of you to reach out to youngsters in grade school, middle school, high school while they are still formulating their ideas about what they want to do with their lives. Spark their interest in aviation. If you know a gifted youngster who shows an aptitude for fixing things or one who is constantly taking apart and putting back together their toys, suggest looking into aviation maintenance as a career path.

"I'm giving all of our readers this mandate. Help a kid find a passion for aviation maintenance. Mentor a youngster by bringing them to the airport, to the hangar and showing them what you do. Plant the seed of a life time of challenges in aviation."

We will need all the help we can get in the coming years. Retirements loom and the industry continues to grow. Jobs in the tech industry may look attractive to kids but there is so much new technology in our industry, that we must also look at potential workers differently. Perhaps the ideal candidate not only likes to take apart and put back together but also writes code. Perhaps the ideal candidate not only likes fixing things but also has a knack for computer technology.

With more avionics equipment, big data, downloadable info and tech in our world, maybe we need to grab some of the kids that are sitting at home creating games so we have their fearless love of all things digital being integrated into our workforce.

Where can you find someone to mentor? Start with your kids, of course, if they are still young enough and undecided about a career path. But branch out to neighbors, Boy and Girl Scout troops, career days at elementary schools, Big Brother/Big Sisters, 4-H organizations, kids in foster care and other places where there are eager, interested kids yearning for input from someone they respect and trust. I guarantee it will be rewarding beyond words to help someone in this way.

I'm giving all of our readers this mandate. Help a kid find a passion for aviation maintenance. Mentor a youngster by bringing them to the airport, to the hangar and showing them what you do. Plant the seed of a lifetime of challenges and adventures in aviation. It's a win-win. **AM**

## Boeing Announces Nearly \$1 Billion in Services Orders at Singapore Airshow

Boeing announced services orders valued at more than \$900 million during the Singapore Airshow in February. “Boeing is serious about helping customers optimize the performance of their fleets and reduce operational costs throughout the lifecycle,” said Stan Deal, president and CEO of Boeing Global Services. “Predicted growth for aerospace services in the Asia Pacific brings opportunities to partner with local industry to understand the region’s greatest needs, invest in new capabilities to meet those needs, and then bring them to market quickly.”

The agreements stretch across Global Services’ four capability areas, including parts; engineering, modifications and maintenance; digital aviation and analytics; and training and professional services.

Many of the agreements were with regionally-based operators including contracts with All Nippon Airways, GAMECO, Malaysia Airlines and Royal Brunei Airlines.

Singapore Airlines signed a contract to use Electronic Logbook on its 777 and 787 fleet. As a Boeing electronic flight bag app, the Electronic Logbook replaces paper logbooks with digital records that improve operational efficiency, Boeing says. Additionally, Singapore’s Defense Science and Technology Agency signed an agreement to engage in collaborative research and experimentation activities, powered by Boeing AnalytX.

Other worldwide agreements included an Alaska Airlines

*Stan Deal, President and CEO, BGS*

agreement to renew Jeppesen Flight Planning for its 737 fleet, Biman Bangladesh Airlines has expanded its use of Boeing’s Component Services Program, and DHL ordered one 767-300ER Boeing converted freighter.

Honeywell Aerospace signed a contract extending Aviall’s product support agreement as the exclusive distributor for Honeywell Aerospace through 2022, covering interior and exterior lighting equipment for all commercial aftermarket product sales. Products covered include indicators, annunciators and other components used on commercial aircraft.

Lufthansa Group signed an agreement for 25 landing gear exchange and overhauls across its 777-200F and 777-300ER fleets for AeroLogic, Lufthansa Cargo and Swiss International Airlines. The service eliminates the need for the operators to contract, schedule and manage the overhaul process.

» DAC Int'l. Adds Boen

DAC Int'l. a subsidiary of Aero Precision Holdings, has added Daniel Boen as a regional sales manager. Boen joins DAC after stints at Matrix Aviation/Professional Aviation Associates and Rockwell Collins where he worked in the repair facility and aftermarket sales division of Intertrade. He will be handling the sales responsibilities for the Western United States in addition to Western Canada. Boen will be based in Wichita, Kan.

St-Martin Appointed Chief Operating Officer, Dassault Aircraft Services

St-Martin

Rémy St-Martin has been promoted to senior vice president/COO of Dassault Aircraft Services (DAS). St-Martin most recently served as VP/GM of DAS Little Rock. He will report to Geoff Chick, senior vice president, Customer service

at Dassault Falcon Jet. "Rémy's extensive customer service background makes him the ideal leader to further improve the efficiency, service quality and close customer relationship that characterize Dassault factory owned service center operations," said Chick. "His easy going manner, can-do attitude and longtime Falcon expertise will be definite assets in his new role." St-Martin will be responsible for leading the DAS management team, defining strategic, operational and financial objectives to enhance the Falcon customer experience and meet new company goals.

Avant Aerospace Announces New President

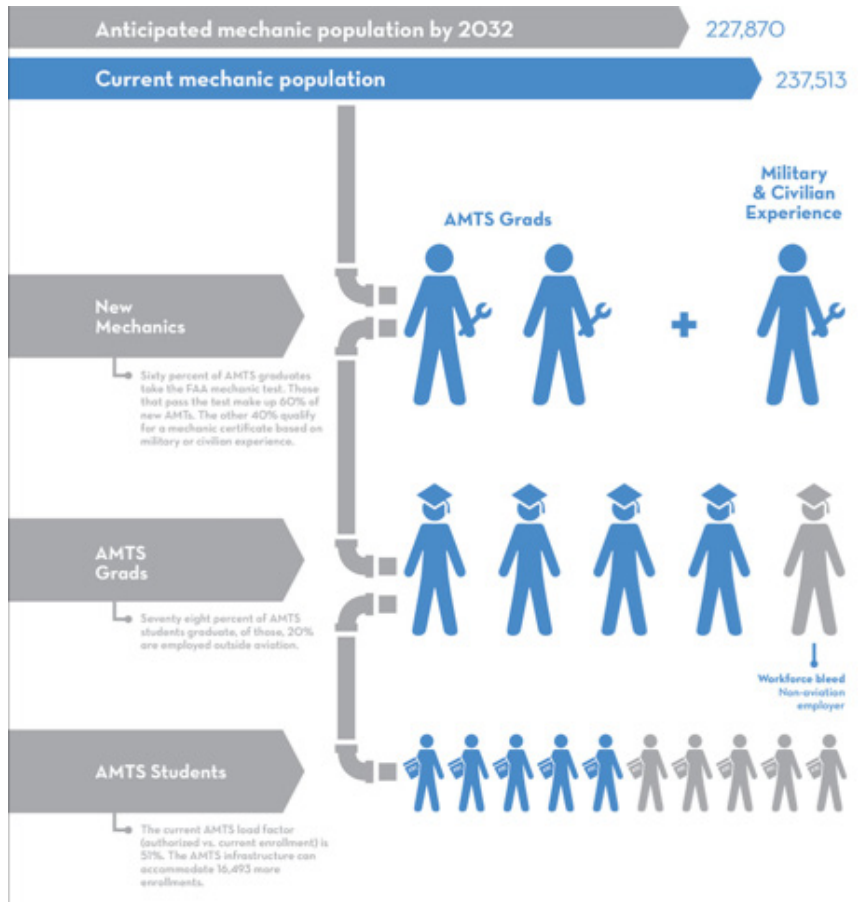

Snodgrass

Avant Aerospace selected Don Snodgrass as its new president. In this role, he will oversee the Avant teams in Texas, Illinois, and Colorado in addition to his current responsibilities as president of Dallas Aeronautical Services

(DAS). Snodgrass comes to Avant with twenty-nine years of industry expertise. He is a licensed mechanic and pilot and has served as president of DAS for the last thirteen years. His previously worked for Chromalloy Gas Turbine, HAC Corporation, Aero Fabricators, ASG and ILFC and VP of Operations for Lufthansa Technic Composites. Avant says he will work to expand stock lines beyond Dassault Falcon-specific spares and rotables.

Mechanics Retiring Faster Than They Are Being Replaced - ATEC Report's Key Conclusions

The full report can be seen on ATEC's website, [atec-amt.org](http://atec-amt.org).

The Aviation Technician Education Council (ATEC) has compiled information about Federal Aviation Administration (FAA) Airframe and Powerplant (A&P) mechanic certificate holders, the educational institutions that prepare the majority of those individuals for careers in aviation maintenance, and the companies that employ maintenance professionals. The organization does this on a yearly basis and this year's findings include several key conclusions.

The report finds that mechanics are retiring faster than they are being replaced. New entrants make up two percent of the population annually, while 30 percent of the workforce is at or near retirement age. The report says the aviation industry must increase its focus on retaining A&P candidates. Twenty percent of candidates pursue careers outside of the industry and only 60 percent elect to take the FAA mechanic certification test.

While the percentage of female A&Ps is increasing, it remains low, at less than three percent. The ATEC report says this presents an opportunity to help address a looming shortage. ATEC's report says schools have the capacity to double production of A&P candidates. While institutions are ramping up recruitment activities and expect enrollment to increase, there is significant opportunity for industry employers to help define career paths and attract more students into the pipeline.

## Lufthansa Technik Shenzhen Builds Capability

Lufthansa Technik Shenzhen is expanding its service portfolio. The German-Chinese company is strengthening its capabilities in the fields of component repair and composite repair (Airframe Related Components, ARC) as well as engine part repair. Additionally, Lufthansa Technik says extending its Logistics Services, mobile engine services, the Airline Support Team (AST), will reinforce its position in the Asia Pacific region.

Lufthansa Technik Shenzhen recently built facilities to support the Airbus A350, Boeing 777 and Boeing 787. For 2018, A350 capability will include components such as thrust reverser actuator, hydraulic pumps and batteries. The facility employs 600 workers.

## GE Seeks to Narrow Manufacturing Skills Gap in Lafayette

are engaged in full disassembly of LEAP engines as part of field inspection programs

After creating eight factories across the U.S. over the past decade, GE Aviation is working to narrow the skills gap facing many workers seeking jobs in their advanced manufacturing plants.

GE says its Lafayette operation, which opened in 2015, is in the throes of the fastest production ramp-up for a commercial jet engine since jetliners were first introduced in the 1950s. They need technicians holding an A&P certificate for crucial tasks.

The Lafayette factory produces the LEAP engine for CFM International, a 50/50 joint company between GE and Safran Aircraft Engines of France. More than 14,000 LEAP engines are on back order to power three popular twin-engine airplanes: the Airbus A320neo, Boeing 737 MAX, and China's COMAC C919. The Airbus and Boeing airplanes are now in airline service.

"I needed FAA-licensed assemblers," says Eric Matteson, plant manager. "Many people want to work at our site, but they need the license to handle the scope of work which can range from operating \$3 million grinders to unique inspection machines."

In 2016, Ivy Tech Community College, walking distance from the GE plant, established a two-year Associate of Applied Science degree in aviation maintenance technology with a concentration on jet engines. The college then teamed with neighboring Purdue University to ensure the two-year degree also provided for an FAA airframe and powerplant license. Purdue doesn't offer second-year degrees, but offers the FAA license testing and provides access to its aviation equipment for the Ivy Tech students.

Ivy Tech currently has 17 students in the program with the first graduates expected within a year. Ivy Tech hopes to have about 30 graduates from the program each year to provide a pipeline.

Matteson needs licensed technicians for more than engine assembly. They are engaged in full disassembly of LEAP engines as part of field inspection programs. In addition, Lafayette is also a designated LEAP maintenance shop. The FAA certification also provides GE employees with a career path, according to GE. "We've already promoted several of our licensed technicians to management salaried roles," Matteson said.

## StandardAero to Provide PW127M Engine MRO Services for Far Eastern Air

StandardAero was recently awarded an exclusive, eight-year agreement to provide Pratt & Whitney Canada PW127M engine maintenance repair and overhaul (MRO) services for Far Eastern Air Transport Corporation's (FAT) fleet of ATR72-600 aircraft.

"StandardAero is proud to partner with Far Eastern and we welcome our first long-term Taiwanese PW100 customer to our global family," said Peter Turner, president of StandardAero Airlines & Fleets. "We look forward to beginning our eight-year relationship and delivering outstanding MRO services."

## about people

### Duncan Announces Key Appointments

Duncan Aviation recently named Keith Schell as manager of its Components Repairs and Parts & Rotables Sales teams and added two others. Schell joined Duncan Aviation in 2015 as Parts Sales team leader. In 2016, he became manager of the Parts & Rotables Sales team before assuming his current role. The team is completed with the addition of Tony Curtis and Cary Prange, assistant managers for Components Repairs and Parts & Rotables Sales, respectively. Curtis was responsible for more than 160 technicians as team leader prior to his current position. Prange was a team leader for Parts & Rotable Sales before assuming his current position.

Schell

Moog

Doehring

Dan Moog had been added to Duncan's Turbine Engine Service Sales team. Moog brings 25 years of aviation experience that includes aircraft engine and APU field service, regional sales, customer technical support, engineering support, and A&P technician experience. Prior to joining Duncan, he was a Regional Engine sales manager for Turbine Engine Specialists and a Field Service Engine/APU Rep for Honeywell Aerospace.

Additionally, Duncan announced that Chad Doehring has accepted the position of VP of Operations for its Provo, Utah, location. In this position, Duncan says Doehring will join the senior leadership team and will work closely with Provo COO Bill Prochazka on the construction, recruiting and staffing of the new maintenance, modifications and paint complex the company is building at its Provo location.

### Eaton Names Director of Engineering

Power management company Eaton has named Tyler Ford director of engineering for the Aerospace Group's Fluid and Electrical Distribution

Ford

## about people

» Division. He reports directly to Scott Thompson, senior vice president and general manager, FED Division, and functionally to Dave Bailey, vice president, technology, Aerospace Group.

McNelly

**FlightSafety Promotes McNelly**  
FlightSafety Int'l. has promoted Brian McNelly to assistant manager of the company's Maintenance Learning Center in Wichita, Kansas. "We are fortunate to have Brian

as the assistant manager of our Maintenance Learning Center in Wichita," said Daniel MacLellan, senior VP, Operations. "Brian's 32 years of experience in aircraft maintenance and proven leadership abilities will help ensure our Customers receive the highest quality training and outstanding service they deserve." McNelly has been with FlightSafety since 2006 as an Instructor and has held a number of positions with increasing responsibility including program manager, Maintenance Training, assistant director of Programs, and director of Maintenance Training. Brian most recently served as the regional director of Regulatory Affairs, Maintenance. He served in the United States Air Force for 22 years prior to joining FlightSafety.

### Bii Appoints New Technical Director

Aviation component support provider, Bii, has appointed a new technical director, Michael Dancey. His primary responsibilities include technical oversight of the stores and customer requirements, KPI monitoring and technical oversight for all trace and technical records. He will also be offering technical assistance to the sales and repair teams and training new starters for stores and human factors. Dancey has held several senior production and technical management roles with major flag carriers. An engineer with CAA approval, Dancey has specialized in major projects including aircraft hand backs, deliveries, record reviews and repossessions.

### Wall Colmony Announces Mohrbach as VP Finance & Ops

Ed Mohrbach joined Wall Colmony in January. Mohrbach was president of the PCS Company, a manufacturer and distributor of products within the plastics Industry. At Wall Colmony, he will work closely with management of all domestic divisions - Alloy Products, Aerobrazo and Franklin Bronze Precision Components to drive sales »

## Duncan's Tooker Receives Master Mechanic Award

Darwin Godemann presents Bob Tooker with Charles Taylor Master Mechanic Award.

Bob Tooker, a sales representative for Duncan Aviation's Parts and Rotables Sales and a long-time aircraft technician with Duncan Aviation, was recently honored as a recipient of the Charles Taylor Master Mechanic Award.

The award was presented by Nebraska Aviation Mechanics Seminar committee and the FAA in January. The award recognizes the lifetime accomplishments of senior mechanics and recipients are required to have worked for a period of 50 years in an aviation maintenance career and must have been an FAA-certificated mechanic or repairman working on N-registered aircraft maintained under the federal aviation regulations for a minimum of 30 of the 50 years required.

Tooker has been employed in aviation for 50 years, 43 of those years being dedicated to serving at Duncan Aviation. Tooker began his career in the U.S. Navy in 1967 and was sent to Avionics School.

In 1974, at a time when there were only 17 aircraft mechanics at Duncan Aviation, Tooker came to the company to work on early model Learjets, Bonanzas, Barons, and King Air aircraft. In 1984, Tooker helped Duncan Aviation develop and start its Parts and Rotables Sales department, which manages an extensive inventory of aircraft avionics, parts and rotables available for sale. Tooker wore many hats during his years at Duncan, including inventory quality control, and sales rep. One of his favorite projects was the disassembly, transportation, and reassembly of a Learjet 35 that can be seen hanging in Terminal 3 of the Denver International Airport.

Tooker has a lot of gratitude for Robert Duncan, Chairman Emeritus of Duncan Aviation. "I always felt encouraged and empowered by the trust Robert put in me early in my career. I want to thank him for the fun ride," he said.

## Airbus Repair Operations in Asia Pacific to be Performed by Thales

Thales will be Airbus' subcontractor for MRO across Asia-Pacific for repair of all avionics components on Airbus' single-aisle, long-range and A350 aircraft for seven years.

Repairs will be carried out from the Thales regional MRO hub in Singapore, the largest of the group's three repair HUBs which services over 40,000 components per annum.

The Asia Pacific region is recognized by Airbus as a strategic nerve center for growth in the next 15 years with demand for new aircraft more than doubling by 2036. The announcement of this contract came during the Singapore Airshow in February.

## Lufthansa Technik and Pepperl+Fuchs Found Start-Up 3D.aero

The two German companies, Lufthansa Technik and Pepperl+Fuchs, have founded an equally owned joint venture called 3D.aero. They say the aim of the new company is to research, develop and sell innovative automation solutions for the aviation industry. The JV will work on solutions for the digitalization of workshops. Its headquarters are at the ZAL TechCenter in Hamburg-Finkenwerder, one of the largest and modern aviation research centers in the world.

Besides industrial workshop and factory automation solutions, 3D.aero will also offer the application of optical measuring devices, digital inspection and image processing applications and related consulting services. The company will consist mainly of Pepperl+Fuchs employees and graduates of the Institute for Aircraft Production Technology at Hamburg University of Technology.

## Aerospace Repair Services from Barden & FAG:

### As-new quality at a fraction of the new price!

The Barden Corporation and FAG Aerospace - two of the acclaimed companies of the Schaeffler Group - offer world-class remanufacturing services that can significantly lower your total maintenance costs.

Without compromising system reliability.

As you would expect from one of the world's preeminent bearing manufacturers, we don't merely inspect and clean your bearings. We restore them to as-new condition, with all components manufactured to their original specifications by our OEM-approved production facilities. Plus, all of our reused and remanufactured components are 100% NDT-inspected!

Strategically located for your convenience:

» growth. Mohrbach has a bachelor's degree in Mining Engineering from Pennsylvania State University and an MBA in Finance from the University of Pittsburgh. He also has a Lean Six Sigma Green Belt Certification from Oakland University.

**CSSM Appoints Ashton President/CEO**  
Corporate Service Supply & Manufacturing (CSSM) announced the appointment of aviation industry veteran Scott E. Ashton as the company's new president and CEO. Most recently he served as president of Associated Aircraft Group (AAG), a New York based provider of helicopter Fractional Ownership, Charter, and MRO services. Prior to AAG, Ashton served in commercial roles at Gama Aviation, GE Capital, and Goodrich Engine Control Systems. Ashton is an NBAA Certified Aviation Manager (CAM), and he holds a B.S. in Aero Engineering from Worcester Polytechnic Institute, a Masters in Engineering from University of Hartford, and an M.B.A in finance from Rensselaer Polytechnic Institute.

**Private Equity Firm New Heritage Capital Invests in Flying Colours**

Canada-headquartered Flying Colours announced that Boston-based private equity firm, New Heritage Capital, has become a minority stakeholder in the business. The transaction, structured using Heritage's Private IPOsolution, was ratified and signed by Flying Colours President John Gillespie, and Heritage Partner, Judson Samuels, at the end of January. Flying Colours says it will retain its management and operational independence, and will benefit from increased financial resources at a time of considerable growth. The deal enables Flying Colours to realize high-value projects which include expanding service lines, infrastructure development, and the building of additional hangars, the company says. "We are delighted to partner with Heritage, as with this capital boost we are well positioned to fulfil the next phase of our ambitious growth strategy," said Gillespie. "We also look forward to working with their team to seek acquisition opportunities to accelerate our development and scalability across the global business aviation sector." Heritage specializes in partnering with founder and entrepreneur owned businesses that want to grow. "We had been approached by several companies who were eager to invest, but Heritage's extensive network, and focus on growth, brings much more than just financial value to our new partnership. It's a very exciting time for Flying Colours," concluded Gillespie.

**Quality Experience, Turntime**

# Maintenance Training As Advanced As Your Aircraft

Classroom • Hands-On  
Technology-Based Instruction

Advanced aircraft require equally advanced maintenance and training. FlightSafety works directly with manufacturers to develop a full range of factory-authorized, in-depth classroom and hands-on, technology-based training. Professional, safety-focused training that's approved by leading aviation authorities around the globe. More courses, more instructors, more locations. Curriculum includes the latest information from the manufacturers as well as training based on real-world operator experiences. Technicians learn best practices from accurate, carefully crafted, constantly updated courseware. From initial familiarization to advanced professional development – online, on location and at convenient Learning Centers worldwide.

**Aircraft** ATR, Beechcraft, Bombardier, Cessna, Dassault Falcon, Embraer, Gulfstream, Hawker, Honda, Piaggio, Pilatus, Saab and Sikorsky

**Honeywell Aerospace** Exclusive training on APUs, avionics, engines, environmental controls and satcom systems

**Pratt & Whitney Canada** Factory-authorized instruction, from theoretical to practical, on all P&WC engines and APUs

**Rolls-Royce BR725** Factory-authorized training, including engine, line maintenance, borescope inspection and troubleshooting

**Master Technician** Standard-setting professional development training to enhance skills and problem solving

**eLearning** A broad range of online maintenance training where and when you choose

**Aircraft Electronic Technicians** In-depth exploration of the fundamentals of avionics maintenance

**Cabin Communications** Customized training to operate and maintain today's sophisticated cabin systems

Aviation professionals from around the world trust us to provide the highest-quality training and outstanding service. More than 1,800 highly experienced professional instructors deliver aircraft- and mission-specific courses, using our comprehensive training systems and advanced-technology flight simulators designed to enhance safety. Trust your training to FlightSafety. You'll see why so many aviation professionals make the same choice. And have since 1951.

# What's Eating My Airplane?

## News from the Corrosion Front

by Charlotte Adams

*This image shows the catastrophic failure of the acoustic screen wrapped around the P1/T1 probes on a Lear 60. Quiet Technology Aerospace (QTA) has developed an STC to address aircraft whose inlet cowls suffer from in-service corrosion. The company modifies these inlet cowls by replacing the inner barrel with a single-piece, carbon graphite barrel with Nomex honeycomb. QTA image.*

Corrosion is a never-ending challenge. Left untreated, it can make an aircraft unairworthy in just a few years, says the Aircraft Owners and Pilots Association. Corrosion can weaken structures and accelerate metal fatigue. It was a major culprit in the Aloha incident in 1988 and was implicated in the El-Al 747 disaster in Amsterdam in 1992 and the Chalk Ocean Airways Mallard seaplane crash in 2005.

Corrosion is relevant to the aluminum substrate used in aerospace and the flight environment, says Richard Giles, global technical service & training manager for Sherwin-Williams Aerospace Coatings. Older aircraft are generally more vulnerable to deeper corrosion, he adds.

Military airplanes – especially those operating in salty marine environments, in deserts with salt-laden sand, and in polluted airspace – are particularly susceptible to corrosion. The U.S.

Navy faces a bigger corrosion challenge than the other services do, given the Navy's operational environment, aging fleets, and stressful carrier takeoffs and landings.

The Navy Department – based on FY2014 data compiled by contractor LMI – was spending over \$2.7 billion on corrosion issues in its aviation and missile fleets. In the same period the Air Force was spending more than \$5.4 billion on aviation and missile corrosion issues, LMI says. The Army, meanwhile, was spending almost \$1.2 billion on aviation and missile corrosion issues in this period.

### Corrosion ABCs

Pitting corrosion — caused by salty environments — is usually the most damaging on aluminum, says Victor Rodriguez-Santiago, a materials engineer with the Naval Air Warfare Center's Aircraft Division. When the powdery deposit resulting from the corrosion is cleaned away, pitting corrosion manifests itself as tiny pinholes visible in the surface. Pitting can lead to cracking, stress corrosion, and metal fatigue.

"Corrosion can really knock down fatigue life," he says. "That's

This close in shot shows how fungal contamination in an aircraft compartment degrades a polyurethane topcoat. U.S. Air Force photo/Dr. Wendy Goodson.

why corrosion is a big safety issue – you may be thinking that you have more fatigue hours” than you actually have. “Corrosion, even in isolated areas, can introduce added frame stresses over larger areas, leading to premature metal fatigue,” Giles agrees.

Galvanic corrosion, involving the interaction of dissimilar metals, is also a big challenge for the Navy, Rodriguez-Santiago says. It usually involves a concentrated attack over a small area, such as near a fastener, where the fastener — made of a metal other than aluminum — is used to attach two pieces of aluminum plate.

Nor are composites problem-free. A lot of aircraft use composites, and the composites, themselves, rarely corrode, he says. However composites “can cause a lot of corrosion damage on metals ... and may exacerbate corrosion.”

Aircraft on a carrier deck are exposed to wave action and mist, an “extremely aggressive corrosion environment,” Rodriguez-Santiago says. And even on the lower decks airplanes are exposed to very high levels of humidity.

Maintainers are instructed to clean and blend out all signs of pitting corrosion and all corrosion near a fastener or lap joint. While the Navy uses fasteners made of corrosion-resistant steels or

titanium – which does not corrode — titanium can cause corrosion on aluminum if the fasteners are not properly coated.

The Navy depends on coatings and surface treatments as its primary line of defense against corrosion, Rodriguez-Santiago says. The Navy also uses corrosion prevention compounds (CPCs) and washing and rinsing and aircraft protective covers. But these are short-term measures, he says.

Washing and rinsing help, but these operations don’t always get into the nooks and crannies where salt and other corrosion agents accumulate, he says. Oil-like CPC chemistries – some of them formulated by Naval Air System Command (NavAir) scientists – are usually meant for doors and panels that are frequently opened. Applied by technicians at the squadron level, “the CPCs are not meant to last a long time.”

Dallas-based Corrosion Technologies offers CPCs such as CorrosionX, and the NavAir-formulated NavGuard, says president Fred Kenner. These chemicals can be atomized into a “fog” – via the company’s Handi-Spray application systems — when applied to areas such as the inside of a wing. The company says that this method of application will deposit a light coating on every surface

Riveer Environmental provides automated clear-water rinsing systems (CWRS). Shown is a B-52 wash system installed at Barksdale AFB in Louisiana. Riveer image.

A composite inner barrel is added to the original inlet cowling's outer skin, lip skin and attachment flange on a Lear 60 aircraft. QTA image.

in the enclosed area and avoid using excessive amounts of the product.

Aircraft protective covers also "add a layer of protection," Rodriguez-Santiago says. They make it easier when you have to wash an aircraft because there is less salt. The use of covers, however, depends on the mission. If the airplanes need to be ready at a moment's notice, "covers are not an option."

Coatings are formulated to last between trips to the depot, where they are stripped off and new coatings are applied. But coatings can be damaged through wear-and-tear and even flexes and bends in flight. Tiny cracks may ensue, allowing salt water and humidity to penetrate the coating. Minor scratches and minor corrosion attacks around fastener holes can be blended out and the surface, touched up, at the squadron level. But if this action would exceed the part's allowable blend-out margin, that part would need to be overhauled or replaced.

In addition to the "bilge" area under the floorboards, fastener holes, lap joints, wings, and engine inlets, other places that are susceptible to corrosion include access panels and doors that are frequently opened, hinges, flaps, and flap actuators. "Areas that move and are in contact with the elements are very vulnerable," Rodriguez-Santiago says.

One response is the Navy's Corrosion Prevention Team (CPT), initiated in the 2007-2008 timeframe. CPT's job is to identify the biggest corrosion culprits in terms of dollars or maintenance hours. As a result of CPT's work, corrosion maintenance costs as a percentage of total maintenance costs have decreased from FY07 to FY16 from about 26-27 percent to roughly 23-24 percent, Rodriguez-Santiago says. That's a lot of money, he adds.

## Microbial-Influenced Corrosion

Another target in the corrosion wars is living matter – microscopic

organisms such as bacteria and molds, yeasts, and mildews. These microbes can impact the health not only of maintainers but also of weapon systems. The Air Force Research Lab (AFRL) is examining microbes' role in corrosion.

Microbiologically-influenced corrosion (MIC) can be caused by acids secreted as byproducts of the organisms' metabolism, explains Dr. Wendy Goodson, AFRL senior biological scientist. Or the microbes can produce harmful enzymes.

One research thread involves looking at the applicability of an aircraft "oven" designed for the decontamination of aircraft exposed to biothreats like anthrax. The Joint Biological Agent Decontamination System (JBADS) so far has been used "to combat mold contamination," Goodson says. But in some cases "it was apparent that the mold was causing MIC." (MIC is thought to open the door to, or perhaps even cause, corrosion in metals and non-metallic materials.)

The initial JBADS test – designed to eradicate anthrax — was performed on a decommissioned C-130 at 170 degrees F and 90 percent relative humidity for 36 hours. This killed 99.9999 percent of the microorganisms, Goodson says. But the aircraft can be brought back to baseline levels of microbial contamination by baking it at 150 degrees F and 50 percent relative humidity for 12 hours, producing a 99.9999 percent reduction in most cases.

Microbe-friendly zones include areas such as the space under the cargo bay floor, where liquids can pool, cargo bay D rings – tie-downs on the cargo bay floor — and "avionics areas where the environment is nice and warm."

The jury is still out on MIC as a cause of corrosion on aluminum, Goodson says. MIC is easiest to prove on coatings, "where we can often see a large fungal colony with cracked coating underneath it."

Rodriguez-Santiago similarly points to helicopters' "bilge" areas under the floorboards as potential microbe attack zones.

# Increase Savings Improve Performance

The Rolls-Royce Value Improvement Package (VIP) significantly improves post-production performance for Bell 407 and MD600 operators! Available through the M250 FIRST Network and Aviall, the VIP package also provides an increase in range and power, better fuel efficiency through less fuel burn, increased hot and high performance, and an overall improvement in engine performance. Contact your local Aviall representative today. Go with Aviall.

Helicopters fly around with their doors open, so salt spray can get into this non-hermetically sealed compartment. "We go to great lengths to put ... fairly thick coatings on those areas, but microbes feed on the coatings and degrade them," making the underlying metal more susceptible to the corrosive environment.

"Fuel systems are particularly conducive to microbial growth because fuel can serve as a nutrient source," Goodson says. "Fuel cell MIC on C-130s was a subject of several maintenance newsletters in the 1960s." Since then, however, changes to fuel handling procedures, fuel tank design, and fuel composition have helped to control microbial growth. But the push for biofuels will bring more challenges – especially if these fuels are processed from vegetable oils and animal fats – as microbes thrive in these substances, an AFRL publication advises.

While researchers are getting better at quantifying the numbers of MIC organisms, "we still cannot predict their impact on fuel systems" or define precisely under what conditions MIC will develop, she says. But new techniques such as next-gen DNA sequencing could fill this gap. Among the objectives are better testing metrics – with relevant organisms – and baselines for "normal" contamination, so

one can understand how and why MIC levels change when changes to the system are made.

AFRL, together with the Naval Research Lab also is studying coating biodeterioration and is developing biocontaminant sensors for fuel systems along with industry partners.

### Quiet Technology – Engine Inlet Upgrades

If corrosion damage is so severe that the corrosion cannot be removed, the affected parts or surfaces must be replaced. Quiet Technology Aerospace (QTA), a company

specializing in corrosion remedies, has developed FAA-supplemental type certificated (STC), composite-based inlet cowl upgrades that “eliminate problems of in-service corrosion” that occur in certain business aircraft, says Martin Gardner, vice president of engineering. Florida-based QTA designs, manufactures, and installs these upgrades under its PMA authority.

QTA found a range of aircraft whose inlet cowls — the part of the engine cowl forward of the fan — “suffer from severe in-service corrosion,” Gardner says. The company’s solution is to modify these inlet cowls by replacing the acoustically

treated inner barrel with a single-piece, carbon graphite barrel with a Nomex honeycomb. This composite material is “impervious to corrosion and lighter in weight” than the original aluminum barrel, he says. QTA retains the original inlet cowl’s outer skin, lip skin, and attachment flange, reassembling these with the new composite barrel.

Corrosion of the inlet cowls usually starts when moisture comes into the inlet through rain or condensation and seeps through the permeable stainless steel, noise-reducing fabric into the perforated aluminum inner barrel skin, and on into the

aluminum honeycomb core, from which it can't escape.

To date QTA has obtained five STCs, covering the Lear 60, Hawker 1000, Gulfstream G200, Falcon Jet 2000LX, and the Challenger 300 and 350. The company plans to introduce another three aircraft types later this year.

QTA's approach is not to repair the corrosion but to eliminate the root cause, Gardner says. The company has performed 58 inlet upgrades in the past two years and provides a lifetime warranty on the new composite barrels.

The upgrade requires the existing inlet to be disassembled and the one-piece carbon graphite barrel to be manufactured and installed. Downtime ranges from two to four weeks, depending on the type, but QTA can provide loaner or exchange inlets. QTA considers itself to be the only company that offers an inlet cowl replacement rather than just a repair of the original materials.

## Washing and Rinsing

Frequent cleaning helps to remove salt and other contaminants from airframes. Riveer Environmental provides automated clear-water rinsing systems (CWRS) and other cleaning equipment.

"Most military aircraft don't have the luxury of covered storage — of hangars," says Jeff Rowan, director, military programs, for the company. "A clear-water rinse system fills in between washes." In shipboard and coastal environments aircraft should be washed at least every two weeks or sooner if conditions are extreme, he says. But the company "encourages [customers] to rinse aircraft every time they land" or at the end of each day they're doing multiple sorties or training missions.

CWRS is adjustable to specific airframes. At an installation at Andersen AFB in Guam "the control tower has a touchscreen that allows air traffic control to identify the airframe that is coming through," and then the system will trigger the water pattern appropriate for that aircraft.

The company provides clear-water rinsing systems across a range of aircraft, including most USAF fighter types as well as larger aircraft such as the C-130, C-17, and B-52. Rinsing a C-17, for example, uses 4,000 to 6,000 gallons of water, most of which is recaptured, filtered, and reused, Rowan says. The automated system also has water quality monitoring to look for dissolved solids, salts, and pH levels. Dissolved ozone is used to control

microbial growth. Riveer also provides a trailer-mounted wash/rinse system usable for both fixed- and rotary-wing aircraft. The trailer-based systems start at around \$55,000, while the much more complex, automated rinse system runs into the millions of dollars.

## Protective Covers

A number of companies also offer protective covers, especially for rotary-wing aircraft. N.H.-based Cocoon, for example, got its start with Army aviation but has expanded to Navy helicopters, as well as drones and weapons and mounts, according to Chip Crotty, president. The company also provides covers for jet canopies and engine inlets. Cocoon products also protect aircraft from water intrusion, excessive heat in aviation compartments and cockpits, tire cracking, and coating failures.

Cocoon participated in a dem\val program with the Army's Aviation and Missile Command, which determined that covers need to be air-permeable, but not enough to trap heat and moisture, creating a corrosive greenhouse effect. Among other desirable qualities are being antistatic, waterproof, freeze-proof, sand-proof, UV-resistant, durable, and lightweight. **AM**

# Middle East MRO Round-up

**The current global MRO market is around \$79 billion, with the Middle East MRO market expected to account for about 8% of that, according to Jonathan Berger, Managing Director of Alton Aviation Consultancy, a New York-based aviation advisory firm. And while the global market is expected to grow at about 4% per year, the Middle East segment will grow somewhat faster, about 5.3%. In terms of dollar amount, Middle East carriers are expected to double their MRO spending over the next 10 years.**

by Douglas Nelms

In Oliver Wyman Global Fleet & MRO Market Forecast 2018–2028 puts the global MRO market at \$77.4 billion, growing to \$114.7 billion by 2028. That growth will be back ended, with an average 3.5% growth the first five years, but growing to 4.5% between 2023 and 2028.

David Stewart, a partner with Oliver Wyman, a New York-based global management consulting firm, put the Middle East MRO market share at \$8.9 billion with a 4.3% growth expected through 2028. He also noted that engine maintenance drives about 60% of this spend, a higher portion than other regions because of the preponderance of wide bodies in the Middle East as well as the harsh operating conditions. Today, most of the Middle East engine work is outsourced to third parties. The rest is spread out over airframe, component and line maintenance.

Majority of the work will be for the large fleets purchased by the ME carriers over the last 10 years that are now hitting the ramp up for their first heavy maintenance visits, Stewart said.

He also noted that a major problem is going to be finding a source of highly skilled maintenance personnel. Many experienced mechanics are at their retirement age, with a shortfall of workers to replace them, and there's lots of competition for personnel with the right skills. The Airbus forecast reported an expected demand for 58,200 new technicians over the next 20 years.

An Oliver Wyman study last year found that within 10 years, the worldwide demand for maintenance technicians will outstrip supply by 9%, with perhaps a bigger problem being that an "expertise gap" will be created with the worldwide fleet being divided between older and newer technology aircraft.

While the forecasted dollar values and growth percentages vary slightly among the research groups, the bottom line is that the Middle East MRO market will see solid growth. Covering

that growth will be a combination of in-house and third-party MRO operations, with third-party service primarily coming from the region's major carriers, such as Etihad Airways Engineering and Joramco. The rest will come from the OEMs and worldwide MRO providers such as Lufthansa Technik along with specialty providers of specific component maintenance.

### Etihad Airways Engineering

Etihad Airways Engineering, part of the Etihad Aviation Group, is the largest commercial MRO services provider in the Middle East. Its state-of-the-art facility adjacent to Abu Dhabi International Airport has 42,000 sqm of hangar space, including a hangar that can accommodate three A380s simultaneously and dedicated paint hangars. The company has extensive maintenance capabilities for major Boeing and Airbus aircraft types up to Boeing 787 and the Airbus A380.

Etihad Airways Engineering continues to strengthen its positioning in the global market as an A380 Centre of Excellence

Lufthansa Technik Middle East provides full MRO services including repair of structural and composite materials and component supply. Its maintenance services include all short and medium-haul Airbus and Boeing aircraft, as well as the Cyclean Engine Wash service. (Lufthansa Technik Middle East image)

AIRCRAFT  
COATINGS  
THAT  
PROTECT  
AND  
REFLECT

**You expect your aircraft's finish to be durable and great looking. Nothing less will do.**

You expect it to be protected against punishing weather, extreme temperatures, corrosion exposure and aggressive chemical and cleaning materials.

Your plane also needs to reflect and promote your brand – crisp colors, sharp Distinctness of Image – whether it's an airline livery, a corporate jet or your own personal aircraft. You can trust Sherwin-Williams Aerospace Coatings for an impression that lasts. Year after year.

[swaerospace.com/reflect](http://swaerospace.com/reflect)

and a member of the Airbus MRO Alliance, having carried out complex heavy maintenance A380 projects for leading carriers in Asia, Europe and the Middle East. It was the first MRO outside the Boeing network to fully strip and repaint a Boeing 787 and has carried out more than 25 heavy maintenance checks on B787 fleets for customers across the globe.

Boasting a strong third-party customer portfolio spread all over the world and servicing an average of 300 aircraft annually, Etihad Airways Engineering has approvals from all major aviation authorities including EASA's Part 21J Design Organization Approval for major cabin design and modifications and Part 21G Production Organization Approval to produce cabin parts. It continues to expand its extensive range of services which include major structural repairs, cabin modifications and retrofits, connectivity embodiments, major OEM and vendor modifications as well as innovative design, engineering and innovation solutions.

The Abu Dhabi facility has the Middle East's first commercial test lab in collaboration with Lantal Textiles AG, and a technical training facility with EASA Part 147 and UAE GCAA CAR 147 approved training on major aircraft types.

"We do not just aim to be the largest MRO but the best in everything we do. With a multinational team of highly experienced professionals, strong OEM partnerships and a commitment to deliver the highest levels of customer service, I believe we offer a great value proposition to our customers worldwide who rely on us as a one-stop-shop for MRO service requirements," says Abdul Khaliq Saeed, Chief Executive Officer of Etihad Airways Engineering.

### Joramco

Jordan Aircraft Maintenance Ltd (Joramco) was founded in 1963 as Royal Jordanian's Maintenance and Engineering Department. It was privatized as an independent commercial aircraft MRO facility in October 2000, located in the Jordan's Queen Alia International Airport (QAIA) free zone. It operates out of

Turkish Technic and Atlasglobal have recently signed an agreement for the repair and supply of components for Atlasglobal's Airbus A320 aircraft fleet. The agreement will be effective till 2023. Repair work of the components will be carried out at Turkish Technic Sabiha Gokcen facilities. (Turkish Technic image)

five hangers providing 27,000 M2 of hangar space with 66,500 M2 of run-up ramp. The hangars can accommodate up to 10 aircraft.

It is certified up to D-checks and provides full MRO service on Airbus A300-600 to the A340, Boeing 787 and 737 family to include the 737 Max, and Embraer 170, 175, 190 and 195 airliners. It also provides on-wing inspections up to C-checks and does engine removal and installation. Its geographic range of customers include the Middle East, Europe, Asia, Africa, Russia and the CIS countries. Its aviation certifications include Jordan's JCARC, FAA, EASA and "a number of others."

Joramco signed a short-term agreement late last year with Lufthansa Group to provide C-Checks on seven of the German carrier's Airbus aircraft, to include five A340s and two A320s. The agreement ran between December 2017 and February 2018. The company had already completed work on two A340s for Lufthansa.

### Turkish Technic

Sitting right on the border of Europe and the Middle East is Turkish Technic, a major third-party MRO provider for the region and for Turkish Airlines. Initially created to be the airline's maintenance provider as an arm of the airline, it was spun off as a separate subsidiary in 2006, with Turkish Airlines holding 100% of the shares.

The company currently provides what it calls A to Z maintenance from its bases at Istanbul Ataturk Airport and Sabiha Goken Airport. The Sabiha Goken Airport facility was created in 2014 when Turkish Airlines Group formed Turkish HABOM Inc., a new maintenance center established to work with Turkish Technic. The HABOM facility includes a nine-bay narrow-body hangar, a twin-bay widebody hangar, and a 36,000 M2 engine center.

The latest generation aircraft requires new repair techniques. HEATCON remains your partner to develop innovative composite repair systems.

Lufthansa Technik Middle East CEO Ziad AL Hazmi, shown above, said in January that LTME will double its presence in Dubai. *LTME image.*

Turkish Technic's base maintenance is certified by FAA, EASA and Turkish DGCA to work on all Airbus aircraft from the A300 up to the A340, and Boeing 737s and 777s. It is also certified for Gulfstream C IV series and GV-SP series. Engine certifications include CFM-56-3, CFM-56-5A/5B/5C, and the IAE V2500-A5 series. Line maintenance also includes the MD-80 series and BAE 146.

### **Jordan Aeronautical Systems Company**

JAC was initially established as a joint venture between Marshall of Cambridge Aerospace Ltd (UK) and the Royal Jordanian Air Force to support the RJAF C-130 fleet. It expanded its capabilities to other aircraft starting in 2006, with the Boeing 737-200. It now provides full MRO service for Boeing 737-200/300/400/500, C-130 (L382) and Agusta AW-139 helicopters. It also provides maintenance on the JT8D, CFM56 and Allison T56-7/15 engines. It is based at the Private Free Zone in Amman Marka International Airport.

### **JAV Technic**

JAV Technic is a CAA part 145 Approved MRO, based at Queen Alia International Airport – Amman – Jordan. It initially served as the maintenance provider for Jordan Aviation Airlines but was separated in 2015. Both the airline and JAV Technic are part of the Jordan Aviation Group. It remains the primary maintenance provider for the airline's fleet of Boeing 737 aircraft, and provides third-party work for Royal Jordanian, Tarom and Tarco 737-300/400s and 767-200s. It expects to receive certification to work on the 737NG later this year. At that time, the company will expand its workforce from 85,000 to 125,000. It also has plans for a new hangar to be built in 2019 that can simultaneously accommodate three A330s.

### **Lufthansa Technik Middle East**

Lufthansa Technik Middle East is a subsidiary of Hamburg, Germany-based Lufthansa Technik and one of the largest subsidiary MRO operations in the Middle East.

LTME CEO Ziad AL Hazmi noted that the Middle East airline industry "has one of the fastest growing fleets worldwide, which naturally requires maintenance and service. Lufthansa Technik Middle East has positioned itself to further add value and services in the region."

Lufthansa Technik initially began operating in Dubai in 2014 with a small workshop and mobile teams. In February 2016, it opened up a new wholly owned subsidiary, Lufthansa Technik Middle East (LTME), at Dubai International Airport as part of its Lufthansa Technik Middle East Services. In 2017 it increased its operations with a new, larger facility with expanded capabilities.

The company now has over 2,000 M2 at Dubai south and over 500 M2 at Dubai Airport Free Zone Authority (DAFZA) for material storage and is currently undergoing an expansion program which may double its working area.

LTME provides full MRO services, to include repair of structural and composite materials and component supply. Its maintenance services include all short and medium-haul Airbus and Boeing aircraft, as well as the Cyclean Engine Wash service available at both Dubai International and Dubai World Central, and at Sharjah International Airport.

### **Voga-Dnepr Gulf**

Another outside MRO operator to enter the Middle East market is Volga-Dnepr. The Russian-based MRO provider established Volga-Dnepr Gulf (VD Gulf) in Sharja in 1996 to provide maintenance for Russian-built aircraft.

Texel Air, located at Bahrain International, provides third party maintenance including minor modifications, repairs and A-checks. *TexelAir image.*

Aerostructures Middle East (AMES) is a joint venture between AFI KLM E&M and Safran Nacelles, providing MRO services for engine nacelles. *AMES image.*

In 2013 it began an expansion program, building a large 22,000 M2 hangar to provide large aircraft MRO. It can simultaneously accommodate six narrow-body aircraft such as the 737/A320, and two 747-size wide-bodies.

In 2015 the company announced plans to expand its expertise to western-built aircraft, obtaining approvals from the UAE's GCAA and the EASA for maintenance on Boeing 747, 757 and 737 aircraft, and Airbus A320 family and A330s.

As a result, VD Gulf recently signed a series of contracts to work on western aircraft operated by regional carriers. A contract with the Turkish Corendon Airlines calls for it to provide maintenance work on that carriers 737NGs, up to heavy C checks, while a contract with Airblue of Pakistan will provide for maintenance on that carriers A320 fleet. A Russian carrier, Rossiya Airlines has signed with VD Gulf for heavy maintenance on its 747-400 fleet beginning this year.

It has also received certification from the Indian DGCA to work on the 747-400, 737CI/NG and all A320 family aircraft, allowing it to enter the Indian MRO market.

It is currently planning a line maintenance facility in the Dubai World Center airport.

### IAI Bedek

One of the world's largest MRO providers, IAI's Bedek maintenance operates out of 12 bays at Ben-Gurion International airport in Tel Aviv, to include seven wide-body bays and five narrow-body bays.

IAI Aircraft Division provides two complement elements, MRO and cargo conversions. It lists itself as a full-service provider for maintenance on airframe, engines and components, with on-site maintenance services along with ageing aircraft and life extension programs. It is certified by all major civil aviation authorities and is authorized to work on Boeing 707, 737 classic and NG, 747, 757, 767, 777-200/300, along with line maintenance for 787s, Airbus A320, A330, A340, Lockheed L-382 and C-130, Gulfstream G150/G200 series and Bombardier Challenger C1600 series.

Total support programs include in-house engine & component overhaul capability.

It is certified for cargo conversions for Boeing's 737, 747 and 767 aircraft. IAI/BEDEK certifying an STC program for the B737NG aircraft family, with the B737-800BDSF STC expected in mid-2018.

## SPECIALTY SHOPS

### ABL SRL Abu Dhabi

ABL ARL Abu Dhabi is a branch of ABL SRL located in Pomezia (near Rome), Italy. The parent company started operations in Italy in 1993 and opened its Abu Dhabi Airports Free Zone facility in 2015. It is an independent FAA/EASA repair station providing commercial, military and governmental customers with maintenance services and supply for emergency components installed on aircrafts and helicopters, such as evacuation slides, engine fire extinguishers, oxygen bottles, life vests, life rafts, floatation systems.

Certifications for its UAE operations include: FAA Part 145, EASA Part 145, GCAA CAR 145 and DOT for the requalification of the cylinders under pressure.

### Aerostructures Middle East Services

Aerostructures Middle East Services (AMES) is a 50/50 joint venture between AFI KLM E&M (Air France KLM Group) and Safran Nacelles to provide MRO services for engine nacelles and aerostructures parts for airlines operating out of the Middle East Region. It began service in Dubai's Jebel Ali Free Zone in March 2010.

The company provides services for a full range of nacelle types for Rolls-Royce, General Electric, CFM International and Pratt & Whitney engines, and since 2017 radomes, flight controls and all other aerostructures parts. This includes on-wing service for the Airbus fleet of A380 GP7200 / A340 T500 / A330 T700 & CF6 / A320 family CFM56-5A & 5B, the Boeing fleet of B777 GE90 & GE115 / B737 CFM56-7 / B747 CF6 and Embraer fleet of E170/175 CF34-8E engines.

AMES expanded its nacelle service in November 2016 with a new autoclave to handle composite components which will boost its radomes repair capabilities, increasing work on Airbus 320s and Boeing 737s

Thierry Baud, General Manager, said that "AFI KLM E&M and Safran Nacelles are contributing not only their technical and technological expertise to AMES, but also their sales strike force. This guarantees our customers that we genuinely take their expectations into account when delivering our targeted, efficient services."

### Aircraft Accessories and Components Company

Aircraft Accessories and Components Company (AACC) was founded in 1988 as an aircraft components MRO facility for both military and commercial operators, located at Jeddah's King Abdulaziz International Airport.

The company said that part of its growth strategy is to support the creation of a new Maintenance, Repair and Overhaul (MRO) campus in the Kingdom of Saudi Arabia that will focus on three key business lines: Civil and Military Landing Gear, Turbines and Aircraft Components and Systems. The proposed new campus is intended to capitalize on the current economic growth in the region whereby the strategic importance of its petrochemical industry resource has resulted in a large and growing aircraft market that is not supported by an indigenous local maintenance, repair and overhaul infrastructure.

### asscom Middle East

Asscom Middle East is a subsidiary of aascom, or Aeronautic Support Services, based in Hamburg, Germany. The Dubai facility was founded in 2008 and is based in the Dubai Airport Free Zone (DAFZ). It provides avionics and electronics repair shops, as well as after-sales services including 24/7/365 AOG service, full repair service, marketing and distribution of spare parts plus On-Site technical support. It also provides services to MRO operators such as Etihad Airways Engineering, Gulf Technics, Lufthansa Technik, Joramco and SR Technics.

Certification authority includes EASA Part 145, GCAA CAR 145, EN 9110 and EN 9120.

### Execujet Middle East

Execujet was established in Dubai in 1999 to provide charter, aircraft management and maintenance for business aviation. Its primary maintenance operations are at Dubai International Airport, although it also provides line maintenance at Dubai's Al Maktoum Airport. It also maintains a parts facility for "high demand spare parts" and offers regional AOG support through rapid response Maintenance Repair teams.

MRO work includes airframe, avionics and engines for a wide range of business jets and utility aircraft, including Bombardier, Cessna, Dassault, Embraer, Gulfstream, Hawker and turboprops.

Execujet was acquired by the Luxemburg-based Luxaviation Group in 2015. In 2016 it opened an FBO in Riyadh, Saudi Arabia.

### Jet Aviation Dubai

Jet Aviation provides base and line maintenance as well as light scheduled maintenance on a wide variety of corporate aircraft, engines and avionics at its primary facility at Dubai International Airport. It also provides on-demand line maintenance services at Dubai World Central Airport, as well as AOG support at Abu Dhabi Al Bateen Executive Airport, Sharjah International Airport and the wider EMEA region.

It is an Authorized Service Center for maintenance and warranty support for Boeing BBJ, the Dassault Falcon 900 ExEASy, 2000 ExEASy and 7X series, RollsRoyce, Honeywell and Satcom Direct and has full service capabilities for Airbus ACJ, Bombardier Challenger 604/605, Embraer Legacy 600 and 650 aircraft, including L4 and L12 inspections, as well as Hawker Beechcraft 750800/900 series. In addition, it is also a Factory Authorized Service Center for the Gulfstream G150, G200, GIV and GV, G450/G550 and G650 aircraft.

### Jordan Airmotive Ltd

Jordan Airmotive is an independent engine MRO company established in 1985, primarily to support the Royal Jordanian airline fleet. In 2006 it became a totally private company owned by Adam Investment Group, a Jordanian holding company. It is certified by CARC, GCAA, FAA, and EASA to provide MRO work on CF6-80C2 series, CFM56-3, JT8D and RR RB211-524 series engines. Strategic goals for the near future include adding CFM56-5 & -7B capabilities. The company said that its customer base covers not only the Middle East, but also Eastern and Western Europe, the Far East and Russia.

### Texel Air

Texel Air is a Bahrain-based third-party cargo charter airline that also provides limited in-house and third-party MRO work, primarily line maintenance services at its Bahrain International Airport facility. It also provides third-party airframe base services and can "troubleshoot and rectify technical issues on Airbus A300-B4, A300-600, A320, A330 and Boeing 737, 747, 757 and 767 aircraft, including minor modifications, repairs and "A" checks.

### Turbine Services & Solutions Aerospace

Turbine Services and Solutions Aerospace (TS&S Aerospace) is a major aircraft engine maintenance, repair and overhaul (MRO) service provider based in Abu Dhabi. It currently provides engine service to airlines such as Etihad Airways and to OEMs such as Rolls Royce, GE, International Aero Engines and Pratt & Whitney. It is one of two business units within TS&S, the other being TS&S industrial, providing service for industrial gas turbines used by the oil and gas industries.

TS&S Aerospace was originally part of ADAT, which was owned by Mubadala. When Etihad Airways purchased ADAT's MRO business, the engine side remained under Mubadala and was rebranded TS&S.

It currently reports being one of only four GE Aviation licensed repair stations for the General Electric GENx engine and the only one in the Middle East/North Africa (MENA) region. It is also the only independently owned Trent 700 shop in the world. It signed a long-term V2500 parts repair agreement early last year.

# Wiring Harness Repair Services

## It's What We Do

There is a reason airlines and maintenance operations turn to Co-Operative Industries Aerospace & Defense for their engine and nacelle wiring harness repair needs. When you select CIA&D for your electrical harness services, you can depend on a dedicated staff and experienced technicians.

- Economical Repairs with Responsive Turn Times
  - FAA, EASA, and CAAC certified
- Check & Test, Repair & Overhaul, S/B Incorporation
  - Extended Harness Life & Warranted Repairs

Contact us to learn how we can help with your wire harness needs. Harness Repairs - It's What We Do.

# Helicopter OEMs Take Their Support Straight Up

**Aviation Maintenance takes a look at some of the changes helicopter manufacturers are making to improve the ongoing maintenance of their aircraft in the field.**

A & P mechanics perform a 12-year, mandatory inspection on an AS350 AStar helicopter. The Airbus Helicopters Inc. facility in Grand Prairie is set up for fast turnarounds of 12-year inspections. Airbus Helicopters image.

by Dale Smith

**N**ot to overstate the obvious, but helicopters are extremely complex flying machines. And being such, they require a lot of maintenance. Helicopters have a large number of moving parts, designed for minimal weight and high stress (fatigue) conditions. Even the “simplest” light helicopter like a Robinson R22 is a true marvel of mechanical engineering.

This, combined with a low tolerance for failure, results in high maintenance rates and costs. In a published report, the U.S. Army stated that its Ratios of Maintenance Man Hours (MMH) to flight hours for light turbine helicopters averages 4:1. Of course, those helicopters are operating in the most extreme conditions, but still, no wonder helicopters have to work hard for their keep.

Of course, this is no news to the helicopter manufacturers. There’s no question that they invest countless resources developing ways

to bring that ratio closer together. One way they are progressing in that direction is by continually looking for ways to optimize their maintenance practices.

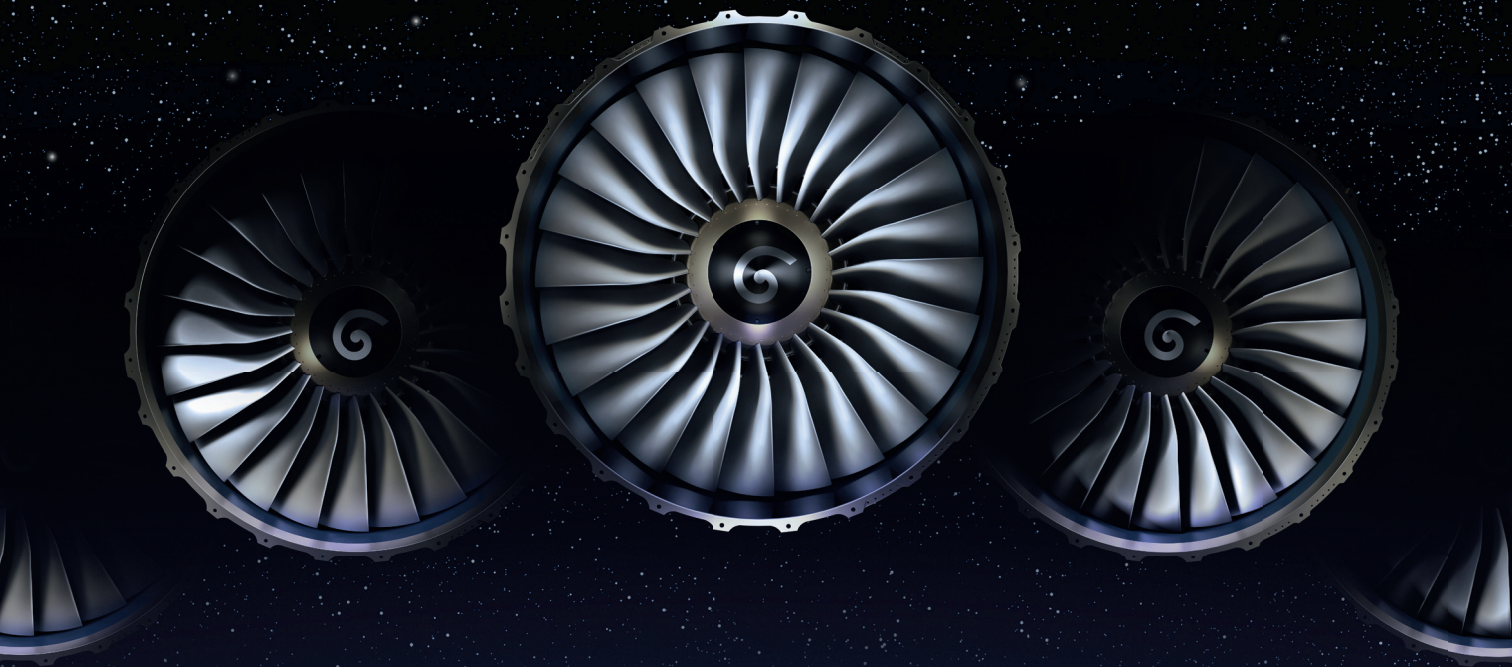

Aviation Maintenance contacted some of the helicopter manufacturers to see what they have introduced to help maintenance technicians in the field to do their jobs faster, safer and more efficiently.

## **Airbus Helicopters Goes Digital with Keycopter**

Airbus Helicopters are in service in every corner of the globe and some of those locations are pretty remote. To make it easier for maintainers to access the information they need wherever they are the company has replaced 90-plus percent of its paper maintenance manuals with digital files.

“Keycopter is our online portal for our customers and maintainers,” explained Darren Huski, systems support specialist and trainer, Customer Support for Airbus Helicopters, Inc. “Users now log into their Keycopter account and that gives them access to Orion – that is

# Day in. Day out.

**CFM Services. Supporting your engine throughout its lifecycle.**

At any point in time – from entry into service to mid-life and through maturity – we have the capability, resources and experience to deliver all of your engine service requirements. From customized programs to tailored transactions, we ensure your CFM engine is maintained to meet your needs and cost of ownership objectives. Wherever you are in the world, whatever day in your engine's life.

**Expertise. Choice. Flexibility.**

**[www.cfmaeroengines.com/services](http://www.cfmaeroengines.com/services)**

CFM International is a 50/50 joint company between GE and Safran Aircraft Engines

Extraordinary together

where they find all the latest manuals and instructions.”

Huski said that one of the problems technicians have is ensuring the instructions they have are the most up-to-date and Orion eliminates that worry. The digital files are as current as possible. And to aid in field maintenance, Airbus has created a series of apps that enable technicians to download all the appropriate files onto their tablet or even smartphone.

“If you don’t have Internet access where you are working, you can just download the information on your iPad,” he said. “It’s like having a mobile repair manual. It’s a big thing with our customers and they really like it.”

Huski also explained that digitizing the manuals aren’t the only new-generation capabilities Airbus is introducing. The company has recently introduced animated 3D maintenance videos for their H175 helicopter.

“We think this is the future of maintenance manuals,” he said. “People learn so much faster if you show them how to do something. Technicians can not only see what’s being done, they can actually spin it around to see the activity from different angles.”

“This is what today’s technology will allow, and we think it’s a whole lot better than paper,” Huski said. “Right now, it’s only available on one of our aircraft, but you’re going to see a lot more of it down the road.”

Another new digitally based tool Huski is excited about is Airbus Helicopter’s new E-Dynamic Troubleshooting capability.

“With paper instructions, you would have to read through the various troubleshooting steps and follow the process on the aircraft,” he said. “That’s extremely time-consuming and can be challenging in remote locations. With the E-Dynamic you basically answer some questions that the app gives you and, depending on your answers, it steps you through the process until you reach the most probable cause for the problem.”

“No matter what you are doing, E-Dynamic greatly simplifies and streamlines the troubleshooting process,” Huski said. “It can really save the technician a lot of time, which reduces maintenance costs and aircraft downtime.”

Another digital tool that will save technician’s time is Orion’s link to the Airbus Helicopters’ illustrated parts catalog. Huski said that when a technician is working on a task, if they need to order parts, they can just click on what they need and Orion will create a complete parts list that can be instantly sent to the operator’s purchasing department.

“It saves time and eliminates the possibility of a busy technician inadvertently writing down the wrong part number,” he said.

### Bell Helicopter Makes Old-School Cool

As complex as helicopters are, it’s hard to argue with Bell Helicopter’s ongoing commitment to providing its customers and their maintainers with the best hands-on training possible. And at the heart of this commitment is the virtual fleet of “practical” aircraft maintenance trainers found in their state-of-the-art Bell Helicopter Training Academy in Fort Worth, Texas.

As Ray Lamas, Bell’s general manager, Maintenance Training explained it, the practical trainers are actual helicopter airframes with all their components installed, which gives students the opportunity to get hands-on experience with all types of inspections and repairs.

“We believe that hands-on training is the best type of training,” he said. “In fact, over half of our training program is focused on hands-on skill enhancing and performance-focused instruction with the practical trainers.”

While airframe inspection and repair garners the majority of the training time, Bell recognizes that dealing with advanced avionics is becoming a larger part of the field maintainers’ responsibility. To that end, the company recently introduced two new avionics bench

## GO BEYOND

A UNITED TECHNOLOGIES COMPANY

This fall Sikorsky introduced Sikorsky360 – an interactive portal with access to web-based interactive maintenance manuals – where technicians can view or download the latest maintenance information. It also ties into their HUMS data system to speed troubleshooting, the company says. (Sikorsky image.)

trainers to the curriculum.

“One avionics trainer is for the Garmin G1000H-equipped Bell 407GX and the other is for the Bell 412EPI, which features our own BasiX Pro Integrated Avionics System,” Lamas said. “The two trainers were custom-built for us by TRU Simulation and Training.”

“The advantage of the bench training devices is that we can take the glass cockpit out of the cockpit and give the students the opportunity to get much more hands-on training,” he said. “They can go through all the avionics maintenance pages. We can introduce faults to allow the students to get practical, hands-on troubleshooting practice and lead them through to a solution of changing an LRU or removing an entire console and replacing it with a new one.”

Lamas also said that the combination of the practical airframe trainers and the new avionics trainers allows instructors to leverage classes on airframe systems common to both a legacy analog Bell 412 and a new digital 412EPI and then introduce the increased troubleshooting needs of the 412EPI's advanced avionics.

“This is the type of training our customers have been wanting for a long time,” Lamas said. “Now we are offering it in our training academy here in Texas and plan to offer it at our facility in Singapore in the near future.”

Lamas stressed that while Bell is committed to continually improving its hands-on training, it is also exploring ways to use advanced technologies to enhance that experience.

“We know it is inconvenient and expensive for our customers to send technicians to us for training, so we are working to find ways to effectively deliver our classroom content via an online system,” he said. “By allowing students to cover this content prior to coming to our facilities, we can shorten the time they are away from their jobs.”

## MD Helicopters Standardizes Mx Forms

One of the biggest challenges for helicopter maintainers always seems to be the inconsistencies they encounter with various third-party maintenance tracking forms. They can spend way too much time just trying to figure out what's what?

MD Helicopters, Inc. (MDHI) has taken a major stride in simplifying

these tasks by standardizing all of its maintenance forms and information and locating it all on their new web portal, MyMD.aero.

“Because these templates were built by the factory, maintainers can enjoy an increased level of confidence related to tracking components and inspections for the aircraft,” stated Nick Nenadovic, vice president, Aftermarket & Customer Support at MDHI. “We've introduced standardized maintenance templates for all of our aircraft. The information was built off the airworthiness limitations from chapters four and five of our Handbook for Maintenance Instructions.”

Another benefit to information standardization is the added efficiency of streamlined parts procurement, which is integral to keeping helicopters operational.

“Because the global MD community is tight knit, the more operators that use the MyMD templates, the greater visibility we, as the OEM, will have into the future replacement parts needs of our customers,” Nenadovic said.

He also explained that MDHI is using this real-fleet data to forecast which parts the MD fleet will be needing and when. “The MDHI procurement team can lean forward and work with suppliers to accurately forecast future demand and negotiate quantity discounts, which would then be passed along to our customers,” he said. “It's a win-win for all parties.”

Another change MDHI recently made was to partner with Aircraft Technical Publishers (ATP) to deliver all of its technical publications via the MyMD.aero portal.

“MyMD.aero leverages the advanced Single Sign-On (SSO) of ATP's Aviation Hub cloud solution, which gives MD helicopter operators greater accessibility to the critical maintenance-related information they need to keep their aircraft safe and airworthy,” Nenadovic said. “Because the information can be accessed on a desktop, tablet or smartphone, technicians have access to the instructions they need whether working out in a remote field or a full-service hangar.”

In addition to remote accessibility, Nenadovic explained that the portal has a new Airworthiness Directive and Service Bulletin tracking capability right on the dashboard, which makes it quick and easy to see any new AD or SB.

*TPAerospace*

**IT'S THAT SIMPLE**

**TPAerospac**

**[WWW.TPAEROSPACE.COM](http://WWW.TPAEROSPACE.COM)**

Sikorsky's new Customer Care Center in Trumbull, Conn. (Sikorsky image.)

"It also lets the operator set custom AD, SB and SL (Service Letter) tracking reminders so they will automatically receive notifications whenever they are issued," Nenadovic said. "That way they'll never miss an update again."

### Robinson Goes "Local" for International Training

With somewhere over 12,000 helicopters operating in every conceivable corner of the world, the task of training a literal army of technicians is something the Robinson Helicopter Company takes very seriously. And to help ensure that their helicopters will deliver the safe and reliable performance every customer expects Robinson runs its own maintenance 'college' at its Torrance, Calif., headquarters.

While Robinson's in-house maintenance program is described as a "basic hands-on" course for the inspection and maintenance of R22, R44 and R66 airframes, Patrick Cox, manager, Technical Support, Robinson Helicopter Company, explained that the course is only available to technicians who already hold a valid A&P license or are active duty military with equivalent knowledge.

"We discourage owners from attending unless they have a valid technician's certificate," he said. "It's way too technical if you don't already possess the knowledge and skills. If they do have a certificate, then they're welcome to pay the tuition and attend."

While Robinson helicopters are found in pretty much every corner of the world, Cox explained that the Torrance facility doesn't get many internationally based technicians for a variety of reasons.

"Depending on what country they are coming from it can be very difficult for students to come here for training," Cox said. "And more importantly than that, it costs a lot to send someone half-way around the world to get training."

So instead of requiring a factory-visit, the company 'partners' with two authorized facilities to offer training for internationally-located technicians.

"We have Mornington Sanford Aviation, which is based in Malaysia, handle all of the training for southeast Asia and Heli Air in the U.K. for Europe and the Middle-East," he said. "Besides their geographic benefits, both of these companies are authorized to provide

EASA-compliant maintenance training."

"The EASA training requirements have become quite onerous now," Cox said. "EASA requires much more practical experience than we can provide here. It's not just hands-on training. They require line-type training if you will. We're not set up to do that."

"So if a technician requires EASA certification, then we refer them to either of the EASA approved schools," Cox said. "Both are also an authorized Robinson dealers and service centers."

Cox said that another step that the company has made that will hopefully make every Robinson Helicopter technician's life easier is to streamline its parts ordering process.

"Helicopter downtime is critical, so we've made strides in filling orders faster," he said. "We've bar-coded all of our spares inventory so we can locate parts faster and track their shipment better. It's old news to many folks, but the bottom line is we're much faster on filling orders now."

### Sikorsky Introduces Sikorsky360 – an Interactive Portal

With a 90-plus year history and a global fleet of thousands of helicopters, Sikorsky has a really deep pool of data to pull from when it comes to understanding and forecasting the maintenance needs of its operators. And all of that information resides in its new Customer Care Center in Trumbull, Connecticut.

"It's the new nerve center of our customer support operations for our commercial operators," explained Simon Gharibian, director, Fleet Management, Supportability and Training for Sikorsky. "One of the areas is the Fleet Management room where we are pulling data from all of our operators, whether it's digital data from the aircraft HUMS (Health and Usage Monitoring System) or maintenance history through business-to-business connections."

"We're continually aggregating that data to come up with a picture to help forecast maintenance needs and what parts we need to stock where in the world," he said. "We recently layered that information with our next generation customer portal called Sikorsky360 and introduced it at last year's NBAA Convention. While there's a lot of information on the site, key to maintainers is it is now where they will find our web-based, interactive maintenance manuals."

"Now maintainers can connect to Sikorsky360 and view or download the latest maintenance information the form of next-generation interactive electronic technical manuals (IETM)," Gharibian said. "To help the maintainer even further, the IETM is coupled with the aircraft HUMS ground station so you can literally take the fault code directly from the system and quickly troubleshoot it via the interactive manual."

"Technicians can now easily pull up the exact maintenance activities to resolve the issue," he said. "In many cases there is also photo and video content that will walk you through the entire maintenance procedure."

Gharibian also explained that the IETM portal on the Sikorsky360 portal also provides the technician with a list of the necessary parts and consumables required to do the maintenance task. And, as an added bonus, it will automatically order the parts you need.

"The thing that I get most excited about, from a maintenance standpoint, is that we have built this continually improving integrated system that will streamline the entire troubleshooting and maintenance process," he said. "Now a technician in the field has access to a thorough history of Sikorsky maintenance lessons so they can benefit from what other people have seen and done in the past."

While the volumes of online information available to a technician is extensive, Gharibian stressed that if they prefer a more personal approach, technicians can always work with their closest regional field support representative or call the Sikorsky Customer Care Center and talk with an experienced technical expert. **AVI**

## NEW V2 Deluxe Kits!

Everything you'll ever need all in one indestructible carrying case!

**4mm & 6mm Deluxe Kits now starting at \$9995!**

**V2 Videoscopes now starting at \$7995!**

**V2 Deluxe Kits Contain:**

- 4-way Articulating V2 Videoscope
- All Standard Accessories
- 90° Prism Tip
- Close-Focus Tip
- V2 Stand
- V2 Rigidizer

# Getting Closure When You Ship Aircraft Parts

**E**verybody talks about getting closure. It is a theme in pop songs and sappy movies. But surprisingly few discussions exist about closing your packages.

Aircraft parts are shipped throughout the world. When you close the box on a shipment, are you thinking about whether your closure complies with the regulations?

When you ship aircraft parts, there are at least two sets of U. S. government regulations that may impact your package closure. The FAA has regulations concerning export packages, and PHMSA has regulations concerning closure of hazmat packages.

The FAA's export regulations specify that someone who exports aircraft parts must "[p]reserve and package [the parts] to protect them against corrosion and damage during transit or storage and state the duration of effectiveness of such preservation and packaging." When this rule was promulgated, the FAA stated "If a product or article does not require any preservation or protective packaging in order to prevent damage, this rule does not apply." So things that don't need preservation or protective packaging are not affected by this requirement.

The rule requires the shipper to state the duration of packaging. What does this really mean? It is difficult to tell. When this regulation was first promulgated, I met with FAA executive Frank Paskiewicz to discuss the new rule and the FAA's expectations. He admitted that the language came from an FAA form and that his team did not have any idea about what metrics they would apply to compliance. He noted that the concept was likely originally related to the concept of expendable, 10 trip and 100 trip packagings from the ATA Specification 300, which recommends packaging standards.

I asked the FAA how they wanted companies to "state the duration of effectiveness of such preservation and packaging." The FAA did not know at the time, and I was told that the FAA would not be enforcing the regulation until they could issue guidance to explain what it meant. But almost ten

years have gone by since that conversation and the executives present have all retired. No guidance has been issued.

The FAA could begin enforcing this rule at any time, despite a lack of any objective standard for how to meet the regulatory requirement. We recommend preserving and packaging aircraft parts for export using standard industry levels of care. We also recommend that the exporter maintain a record that states that the duration of effectiveness of such preservation and packaging is for one trip, unless it is specifically intended for more than one trip.

There are also hazmat regulations that affect closure. Hazmat compliance is important because a surprising number of aircraft parts are regulated as hazardous materials.

For example, the United States regulations require hazmat packages to be properly closed. This means that under normal transportation conditions, hazmat will not be released into the environment and the expected effectiveness of the package will remain consistent with the tested effectiveness. Correlative requirements exist in the IATA Dangerous Goods Regulations (DGR).

How does closure influence the expected effectiveness? In order to ensure that closure does not compromise the expected effectiveness of the package, the regulations require a shipper to follow the manufacturer's instructions for closing the package. These instructions can often be found printed on a flap on a specification packaging. If they are not printed on the packaging itself, though, then they should be found on a document that accompanies the packaging.

As a shipper, you should always expect closure instructions with your specification packagings, because the manufacturer of a specification packaging is required to provide closure instructions.

The shipper is required to close the package in accordance with the information provided by the manufacturer.

The closure instructions may go into tremendous detail, such as requiring you to use the tape that is provided with the packaging (rather than any other

tape) and even explaining precisely where the tape must be applied.

But the manufacturer's closure instructions must also be read in light of the regulations (compliance with both will typically be required). For example, one regulation that must be obeyed says that a combination packaging containing liquid hazardous materials must be packed so that the closures on the inner packagings are upright (which will make them consistent with the orientation arrows required by the regulations). When using the U.S. regulations you need to follow the packaging regulations found in Part 173 and when using the IATA DGR, you need to follow the Packing Instruction found in the yellow pages of section five.

Most people in our community ship their hazmats by air according to the ICAO Technical Instructions, as those are reprinted in the IATA DGR. The procedure for doing this involves selecting an authorized Packing Instruction which guides the shipper in how to legally package the hazardous materials for shipment. The Packing Instruction will describe what packagings are authorized (e.g. a 4G specification fiberboard box). But the Packing Instruction may have additional packaging instructions that also must be followed. For example, the instructions for packaging Dangerous Goods in Apparatus (which is a commonly used proper shipping name in the aviation industry) are currently found in Packing Instruction 962. Packing Instruction 962 explains that when shipping fuels system components (such as a fuel pump containing fuel residue), each component "must be emptied of fuel as far as practicable and all openings must be sealed securely." This must be accomplished before the outer packaging is closed (note that this particular Packing Instruction permits

the use of non-specification packaging and therefore the outer packaging may not include manufacturer's closure instructions meeting the requirements of the hazmat regulations as they apply to specification packagings).

Looking for more details? Join us in one of our hazmat classes! We will be teaching a live online hazmat class on April 24-25. The class is live, so you can ask your questions, but it is also online, so you can take the class from the comfort of your own desk. Our class uses the IATA DGR (and some of the U. S. regulations that remain applicable) and goes through the functional steps you need to accomplish in order to remain compliant with U. S. and international law; successful completion of the class yields a training certificate that meets the legal requirements of the U. S. and most other non-U. S. jurisdictions. You can find registration information at [www.dangerousgoodstraining.net](http://www.dangerousgoodstraining.net).

# 2018 MARPA EMEA Conference

**FIRST WEEK OF MAY 2018  
IN DUBLIN, IRELAND**

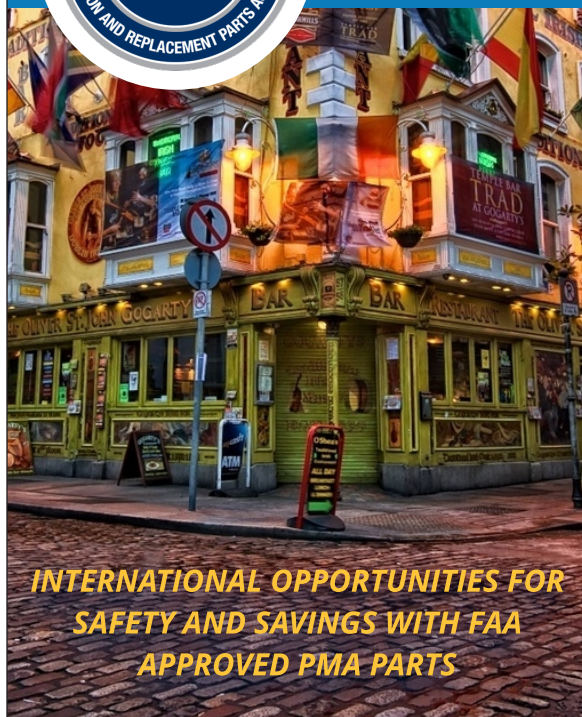

***Why should you be interested in FAA Approved PMA parts?***

- Airlines worldwide have already begun taking advantage of PMA parts on their own aircraft in order to achieve benefits
- Other operators could be enjoying these same benefits like reliability, safety, availability and savings
- The global leasing community should look to FAA-PMA as a way to protect the value of their assets

***Why should you be interested in the  
2018 MARPA EMEA Conference?***

- Networking and education opportunities with lessors, manufacturers, air carriers, and more
- For operators and leasing companies, FAA-PMA parts are part of the solution-oriented approach to safety, reflecting opportunities to achieve benefits like reliability, safety, availability and savings
- For maintenance facilities, FAA-PMA parts can be a competitive advantage when bidding maintenance jobs
- For manufacturers, the FAA-PMA community reflects opportunities for manufacturing partnerships

### FAA RATING LEGENDS AND CODES

#### ACCESSORY

AAC-1: Mechanical  
AAC-2: Electrical  
AAC-3: Electronic  
L-AAAC: Limited

#### AIRFRAME

AF-1: Composite construction, small aircraft  
AF-2: Composite construction, large aircraft  
AF-3: All-metal construction, small aircraft  
AF-4: All-metal construction, large aircraft  
L-AF: Limited

#### INSTRUMENT

INS-1: Mechanical  
INS-2: Electrical  
INS-3: Gyroscopic

INS-4: Electronic

L-INS: Limited

#### LIMITED

L-SS: Specialized Service  
L-EE: Emergency Equipment  
L-FAB: Aircraft Fabric  
L-FL0: Floats  
L-LG: Landing Gear  
L-NDT: Nondestructive testing  
L-RB: Rotor blade  
L-OT: Other

#### POWERPLANT

PP-1: Reciprocating engines, 400 hp or less  
PP-2: Reciprocating engines, more than 400 hp  
PP-3: Turbine engines

L-PP: Limited

#### PROPELLER

PRP-1: Fixed-pitch and ground-adjustable (Wood, metal or composite)  
PRP-2: All other propellers by make  
L-PRP: Limited

#### RADIO

RAD-1: Communication equipment  
RAD-2: Navigational equipment  
RAD-3: Radar equipment  
L-RAD: Limited

#### SPECIAL CAPABILITIES:

SC-1: Aircraft painting  
SC-2: Aircraft interior refurbishment  
SC-3: Aircraft restoration

SC-4: Avionics installation

SC-5: Helicopter maintenance  
SC-6: Piston overhaul  
SC-7: Turbine hot section  
SC-8: Turbine overhaul

#### SERVICES

1: Airframe  
2: Avionics  
3: Engines/Turbines  
4: Wheels & Brakes  
5: Hot Section Inspections  
6: Letter Checks (A, B, C, D)

The Power of Flight

• **CFM USA**, See ad p. 35, 1 Neumann Way, Cincinnati, OH 45215, 513-563-4180, www.cfmaeroengines.com  
CFM International (CFM) was formed in 1974 as a 50/50 joint company between GE and Safran Aircraft Engines. Today, CFM is the world's leading supplier of commercial transport aircraft engines and the best example of a successful international joint venture. Since the first engine was delivered in 1982, CFM has received orders for nearly 47,000 CFM56 and LEAP engines from 570 operators worldwide, of which nearly 32,000 engines have been delivered. In addition to the highly successful CFM56 product line, CFM introduced the advanced LEAP-1A and LEAP-1B engines into commercial service on the Airbus A320neo in 2016 and the Boeing 737 MAX in 2017, respectively.

Founded in February 2014, Lufthansa Technik Puerto Rico (LTPR) is a fully owned company of Lufthansa Technik AG. The Puerto Rican company specializes in the maintenance, repair and overhaul (MRO) of narrow body aircraft of the Airbus A320 family. Lufthansa Technik Puerto Rico is thus the next base in the Lufthansa Technik Group to specialize in the overhaul of short- and medium-haul aircraft, consisting already of Lufthansa Technik's maintenance center in Berlin, Shannon Aerospace in Ireland, Lufthansa Technik Malta, Lufthansa Technik Sofia and Lufthansa Technik Budapest.

• **CFM France, See ad p. 35**, 10, allée de Brévent, CE1420 Courcouronnes, Evry Cedex 91019, France, www.cfmaerengines.com  
**CFM International (CFM)** was formed in 1974 as a 50/50 joint company between GE and Safran Aircraft Engines. Today, CFM is the world's leading supplier of commercial transport aircraft engines and the best example of a successful international joint venture. Since the first engine was delivered in 1982, CFM has received orders for nearly 47,000 CFM56 and LEAP engines from 570 operators worldwide, of which nearly 32,000 engines have been delivered. In addition to the highly successful CFM56 product line, CFM introduced the advanced LEAP-1A and LEAP-1B engines into commercial service on the Airbus A320neo in 2016 and the Boeing 737 MAX in 2017, respectively.

H&L Instruments developed the Model 900, a portable video edge profile comparator in 1985 for United Airlines for inspecting the leading and trailing edges of aircraft turbine engine blades. The current model 900C/CE is rugged precision instrument equipped for either 20x or 40x magnification and video to USB frame grabber to transfer images to a PC. The 900C/CE is compatible with inspection of GE, Pratt & Whitney, Rolls Royce, MTU, SNECMA and other turbine engine blades.

## component control

• **COMPONENT CONTROL MRO & Logistics Software Solutions, See ad p. 41** 1731 Kettner Blvd., San Diego, CA 92101, 619-696-5400, Fax: 619-702-3522, www.componentcontrol.com Component Control is a leading developer and provider of MRO and Logistics Software solutions for the aviation industry. Its core product, Quantum Control, provides advanced aviation management support to OEM's, aftermarket service divisions, component repair and overhaul companies, MRO facilities, and part distribution/redistribution companies. Stockmarket.aero, also from Component Control, is an online aviation parts trading marketplace giving users access to a comprehensive search engine that includes parts in stock, MRO capabilities and part alternatives.

• **CORRIDOR Aviation Service Software / Continuum Applied Technology**, 961 Amberglenn Blvd., Ste. 19, Austin, TX 78729, 519-918-89, sales@corridor.aero, www.corridor.aero CORRIDOR Aviation Service Software is an Enterprise Information System that dramatically improves process and information flow throughout any aviation service organization (FBO's, Repair Stations, Operators, MROs). CORRIDOR has partnered with CAMP Systems to create a seamless aviation ecosystem with electronic bi-directional flow of maintenance task cards between the two products providing reduced cost, decreased downtime, and increased revenue benefits to both Maintenance Organizations and Aircraft Owners/Operators. CORRIDOR addresses a comprehensive suite of aviation processes, including: Inventory Management & Logistics, Work Orders with advanced Quoting and Invoicing functions, Labor Capture, Shop and Manpower Planning & Scheduling, Personnel Training & Qualification tracking and enforcement, Electronic Signature Support, and Mobile enabled interfaces for ease-of-use on the shop floor.

Device Technologies Inc. designs and  
manufactures wire protection, seals  
and trims in industry compliant mate-  
rials that increase productivity 9.5x. Its  
revolutionary snap-on Spring-Fast®  
anti-chafe grommet edging provides  
better protection than traditional  
nylon-based solutions at half the  
install cost. DTI solutions serve  
aerospace-related applications like  
seating, interiors, IFE systems, lighting,  
avionics, power supplies, fuselage and  
ground support equipment and are  
FST, FAR, EWIS, and ARINC compliant.  
DTI provides both standard off the  
shelf and customized solutions.
